PROJECTS

Master Thesis: Optimization of Pharmaceutical Supply Chain using Blockchain Technology

- The main aim of the thesis is to improve downstream supply chain in the pharmaceutical industry by implementing blockchain technology.
- Evaluation and comparison of certain parameters such as cost, time, climatic conditions, temperatures, and lead times for both conventional supply chain and blockchain implemented supply chain.

Designing a Mathematical Model in Maritime Transport / Logistics

- Constructing an efficient network for transporting containers from their source to destination is the backbone of liner shipping. Addressing the Liner Shipping Network Design Problem (LSNDP) challenges - speed, container routing, stowage planning and discuss various factors such as matheuristic for liner shipping network design.

Intermodal transport planning for the delivery of finished products

- Shipment of 800 tons of fish from Oslo (Norway) to Tallinn (Estonia) by combining different means of transport and identifying a feasible and economical solution to reduce transportation time and cost.
